EDRIS OCAMPO

ABOUT ME

Over the course of my early career as a fresh IT graduate in the Philippines, I've gained a staggered total of one year hands-on experience that blends both technical work and real-world grit. I had a project-based freelance job at a travel agency in UK which I've completed in less than a month. For six months, I also worked as a freelance web designer for direct clients sourced through OnlineJobs.ph in a work-from-home setup, where I handled everything from initial client consultations to wireframing, design implementation, and basic site maintenance. This experience strengthened my ability to translate client needs into functional, user-friendly websites, while honing my communication skills, time management, and sense of accountability.

In addition, I spent six months as a tech support staff at Regasco LPGMA at CDCP, where I assisted with basic troubleshooting, device setup, and day-to-day technical concerns, often alongside manual labor tasks while completing my studies. Balancing physical work, academic requirements, and technical responsibilities taught resilience, discipline, and a strong work ethic, while deepening my problem-solving skills and sharpening my attention to detail in fast-paced, practical environments.
